Laporan Porjek UTS Pemrograman Komputer 2

Nama: Ilham Hanif Pamulia

NIM: 18090027

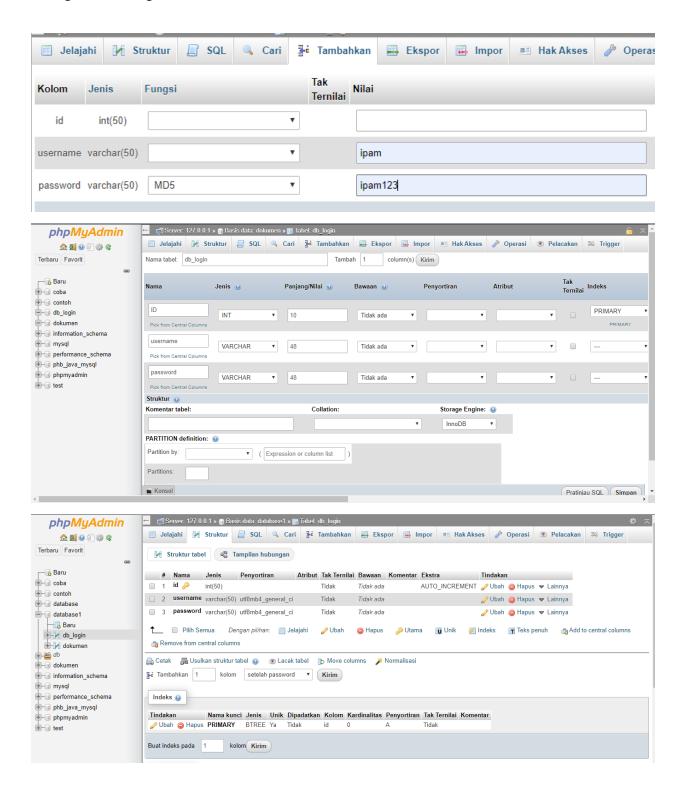

Kelas: 4D

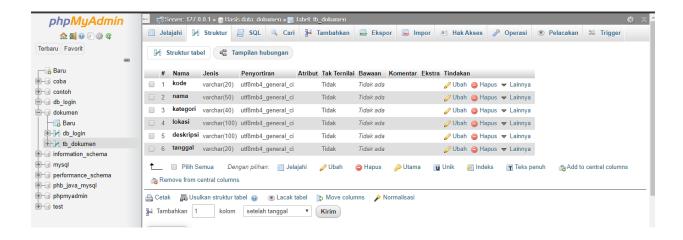

Prodi : D IV Teknik Informatika

Politeknik Harapan Bersama Tegal

A. Membuat database

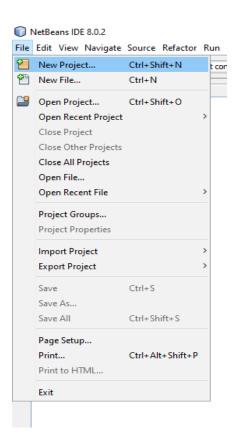

Dengan cara sebagai berikut:

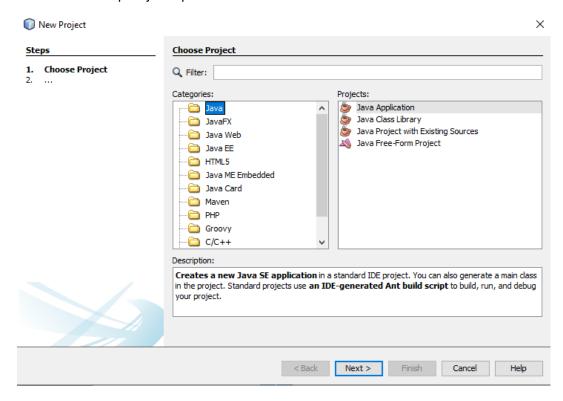

B. Membuat Project

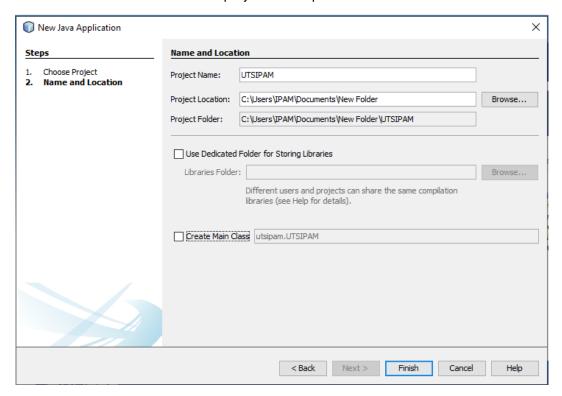

- 1. kita buka netbean
- 2. Lalu kita klik file -> new project

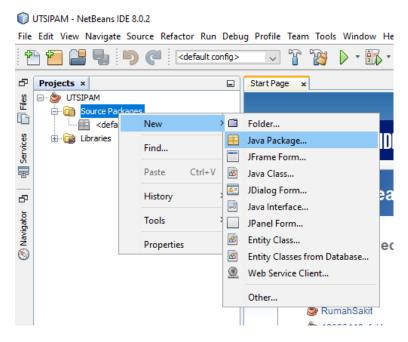

3. Lalu kita pilih java aplication

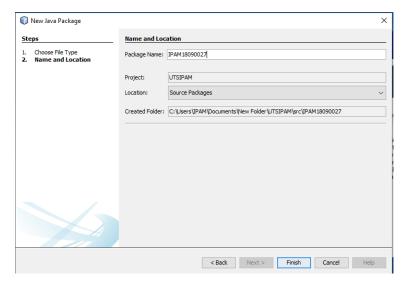

4. Setelah itu masukan nama projeck dan hapus ceklis di bawah lalu klik finish.

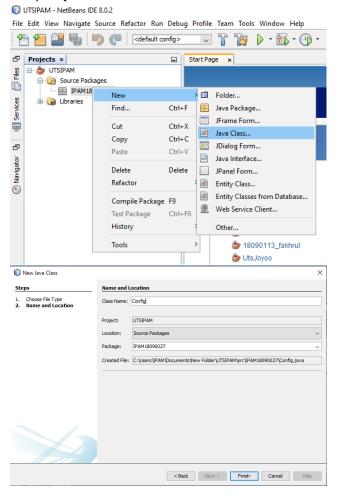

5. Setelah projek dibuat kita akan membuat package baru dengan cara klik kanan di source package, pilih new dan klik java package

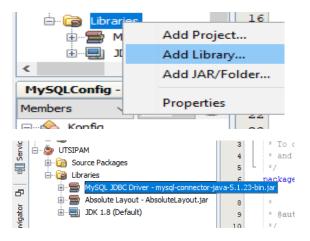

Beri nama dan jgn lupa klik finish.

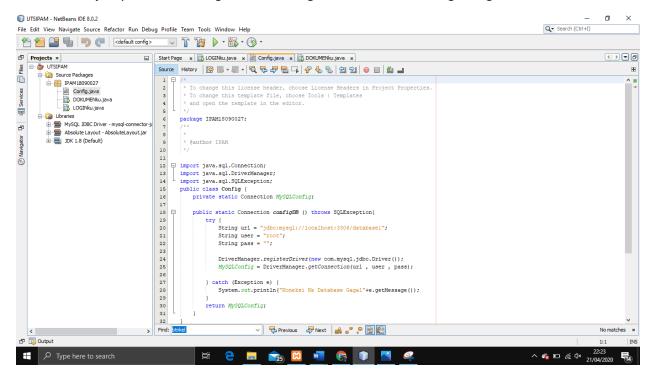

6. Setelah itu dalam java package kita buat class Config dengan cara yang sama seperti diatas tapi kita pilih java class.

7. Sebelumnya jangan lupa kita masukan library MYSQL dengan cara add library.

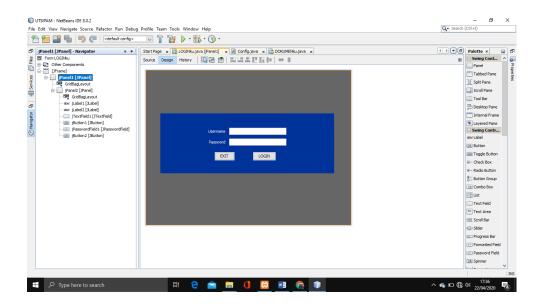

8. Selanjutnya kita masuk lagi ke class konfig dan menuliskan koding sebagai berikut:

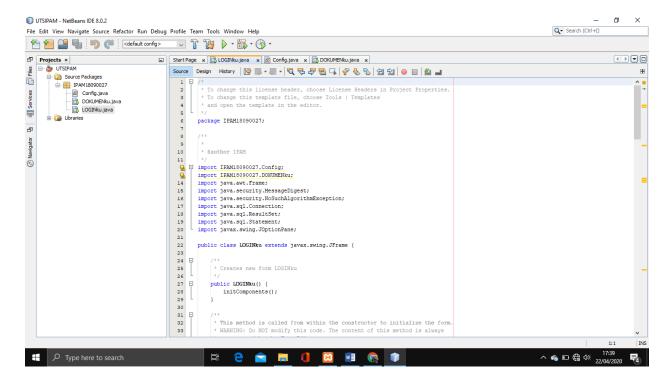

```
5 L */
      package IPAM18090027;
6
      /**
7
8
       * @author IPAM
9
10
      */
11
12
   □ import java.sql.Connection;
13
      import java.sql.DriverManager;
      import java.sql.SQLException;
14
      public class Config {
15
16
          private static Connection MySQLConfig;
17
18
   口
          public static Connection configDB () throws SQLException{
19
                  String url = "jdbc:mysql://localhost:3306/databasel";
20
21
                  String user = "root";
                  String pass = "";
22
23
24
                  DriverManager.registerDriver(new com.mysql.jdbc.Driver());
                  MySQLConfig = DriverManager.getConnection(url , user , pass);
25
26
27
              } catch (Exception e) {
28
                  System.out.println("Koneksi Ke Database Gagal"+e.getMessage());
29
30
              return MySQLConfig;
31
          1
```

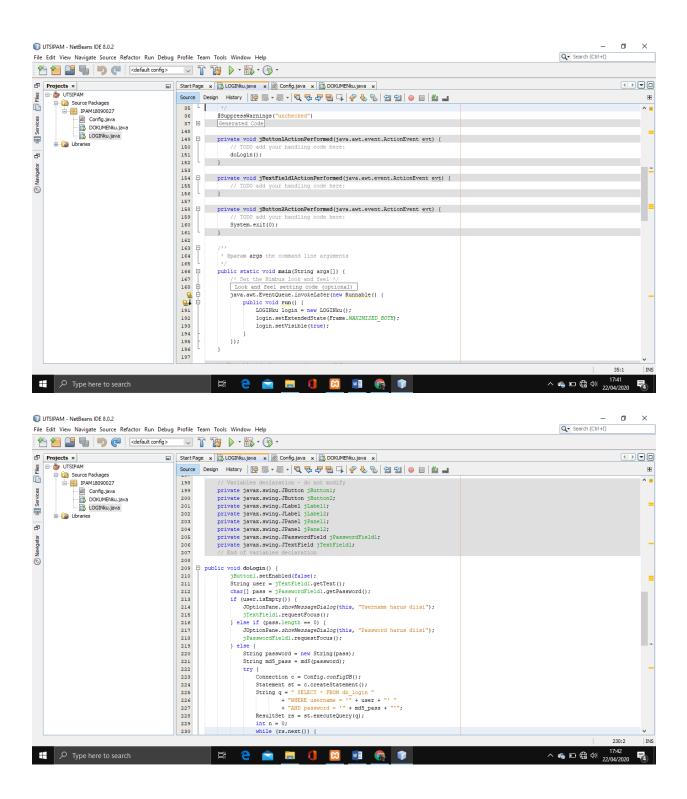

Setelah itu kita buat form login dengan jframe form

Setelah sudah membuat form nya, lalu kita lanjut untuk mengisi kodingan nya agar projek dapat di jalankan

Berikut kodingannya:

```
Π UTSIPAM - NetReans IDE 8.0.2
                                                                                                                                                                                                                                                                                                                                                                                                                                 Q • Search (Ctrl+I)

                                                                                                                                              hashed = sb.toString();
                                                                  263
                                                                                                                               } catch (NoSuchAlgorithmException e) {
                                                                  264
                                                                  265
                                                                                                                               return hashed;
                                                                  266
                                                                  267
                                                                  268
                                                                  269
```

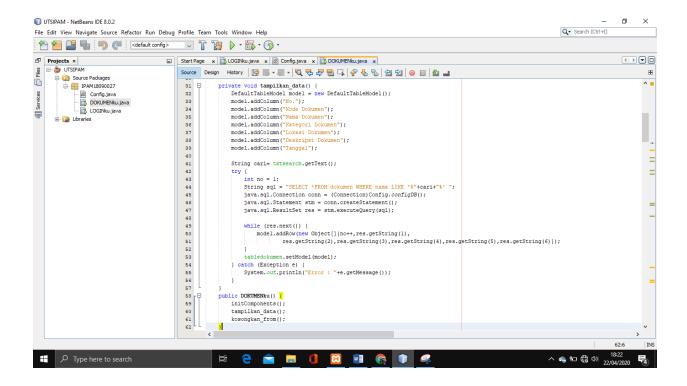

Setelah kita selesai memasukan semua kodingannya lalu kita buat Form Arsip Dokumen

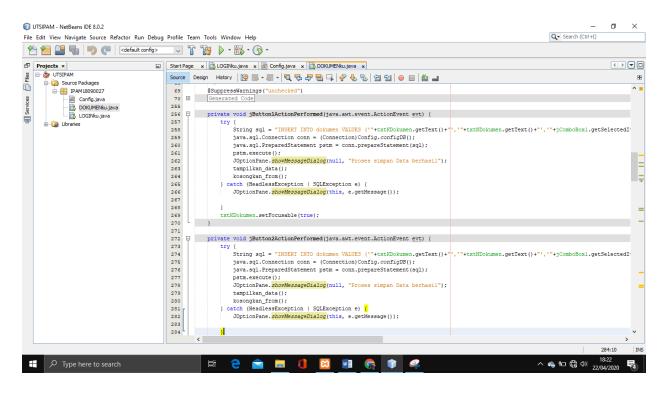

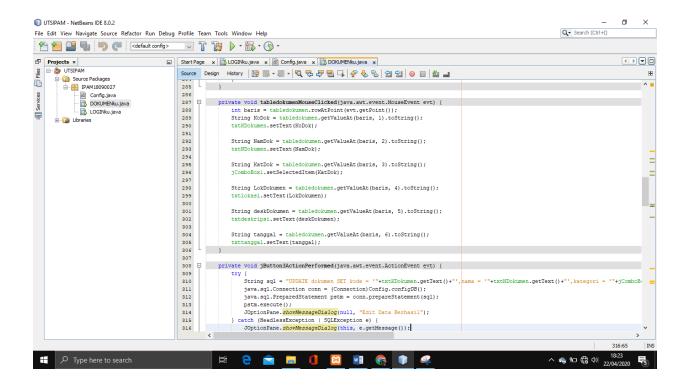

Setelah kita selesai membuat form nya lalu jgn lupa kita masukan kodingannya.

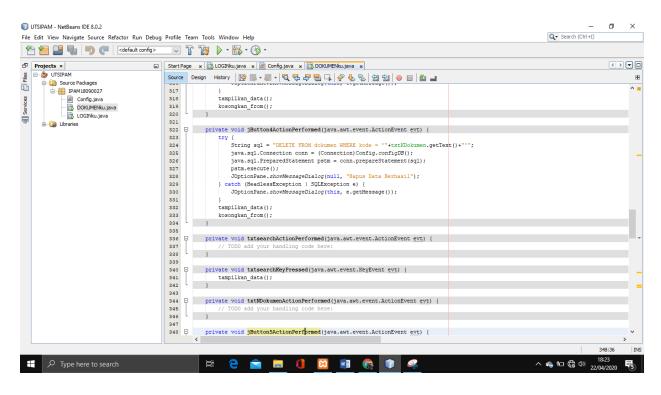

Berikut kodingannya:

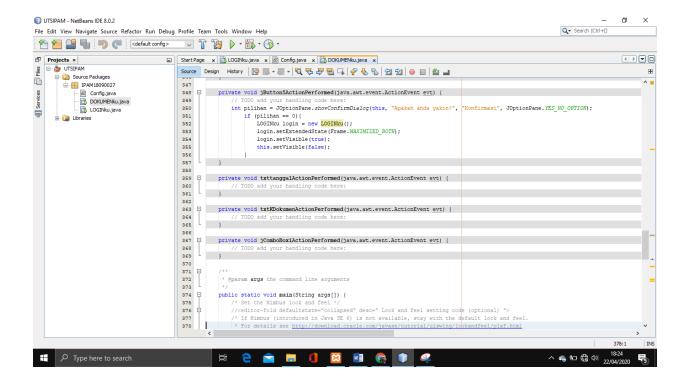

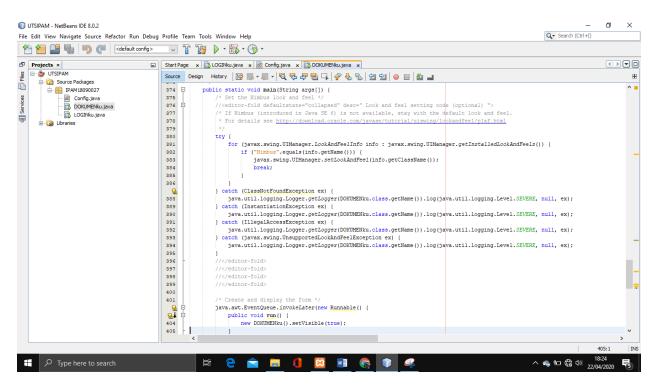

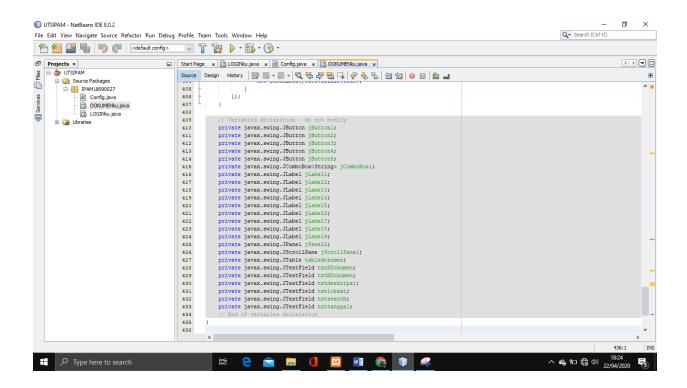

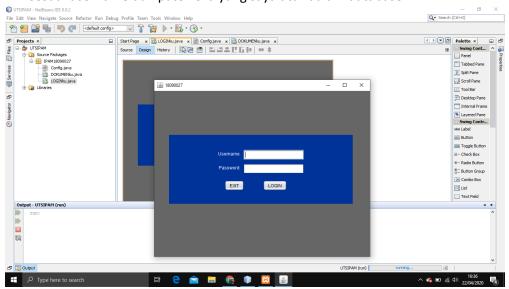

Dan dibawah ini adalah hasil dari Run tampilan projek saya.

1. Login

Username: ipam Password: ipam123

sesuai username dan password yang saya atur dalam database

2. Form Arsip Dokumen
